PHASE 3

APTELY

Talent Interface

The Candidate's Command Centre

Phase 3 turns Aptely into a two-sided platform. Talents get a personalised portal to manage their profile, track applications, prepare for interviews, and accept offers — all in one place.

2026

aptely.io

OVERVIEW

The Talent Portal — 6 Core Modules

01

Talent Profile & DNA Hub

Live capability record the talent owns and evolves

02

Application Tracker

Real-time pipeline view across all active roles

03

Interview Prep Centre

AI-guided prep tied to each specific role

04

Offer & Decision Hub

Review, negotiate and sign offers in-platform

05

Verification Vault

Skill proof assets, assessments and badges

06

Notifications & Comms

All recruiter comms and status updates in one feed

Each module connects directly to the recruiter-side data — talent sees exactly what recruiters see about them

MODULE 01

Talent Profile & DNA Hub

Live Capability Record

Talent sees the same structured Capability Record that recruiters view — skills, proof assets, scores, and context history, all in real time.

Profile Completeness Engine

A dynamic completeness score (0–100%) with specific prompts: 'Add a proof link for React to increase your Skill Validity score by 12 points.'

Skill Graph Editor

Add, edit or deprecate skills. Each edit triggers a re-verification nudge — talent must attach proof or complete a micro-assessment.

Proof Library Manager

Centralised store for GitHub links, Figma files, case studies, sales records, and writing samples. Each asset is mapped to claimed skills.

Profile Snapshot

78%

Complete

Skill Validity	High
Proof Density	4 / 7
Assessment Done	2 / 4

Talent owns their data — they can export their full Capability Record as a shareable PDF at any time

MODULE 02

Application Tracker

Real-time visibility across every active role — no more chasing recruiters for updates.

Shortlisted	Interviewing	Decision	Offer	Closed
Acme Corp Head of Product	Fintech X Senior PM	Startup Y VP Eng	DataCo Head of Data	OldRole Declined
	BuildCo CTO			

Status Push Alerts

Instant notification when recruiter advances, holds or rejects — no more guessing.

Next Step Visibility

Each card shows the next action required: 'Interview in 2 days', 'Awaiting offer decision'.

Timeline View

See full history per application — dates, interviewer names, feedback received.

Tracker data feeds the Reliability Index — responsive, engaged talents are flagged positively to recruiters

MODULE 03

Interview Prep Centre

Role-Specific Prep Brief

AI generates a personalised prep guide for each interview: key themes from the Role DNA, likely question areas, and company context.

Mock Question Bank

Structured question sets per skill dimension and role type. Talent can practise answers and rate their confidence per question.

Interview Schedule & Briefing

Full interview details: panel members, format (technical / values / case), duration, and what to prepare for each stage.

Post-Interview Reflection

After each interview, talent submits a short self-assessment. This feeds into their operating style map over time.

Why This Matters

3×

better interview performance with structured prep

62%

of candidates feel unprepared for first-round interviews

1 hub

instead of scattered WhatsApp threads, PDF briefs & emails

Prep data (confidence scores, self-assessments) enriches the Operating Style map visible to recruiters post-placement

MODULE 04

Offer & Decision Hub

1

Offer Review

- Full offer letter displayed in-platform
- Side-by-side comparison if multiple offers
- Key terms highlighted: salary, equity, benefits, start date
- AI summary of offer vs candidate salary expectations

2

Negotiation

- Submit counter-proposal directly in platform
- Track negotiation history per offer
- Recruiter responds in same thread
- Auto-flag if counter exceeds role band (talent informed)

3

Sign & Accept

- E-signature flow (DocuSign / native)
- Signed copy saved to talent Capability Record
- Automated start-date countdown begins
- Onboarding checklist unlocked immediately

Signed offer data feeds Phase 2's Offer Analytics — close rates, time-to-sign, and negotiation deltas all tracked

MODULE 05

Verification Vault

Where skills become credible — the talent's permanent, portable proof library.

Skill Proof Uploader

Upload GitHub repos, Figma links, decks, dashboards, and sales records. Each is mapped to a specific claimed skill.

Assessment Badges

Complete platform micro-assessments to earn verified skill badges. Badge tier: Tested / Validated / Expert.

Peer & Client Reviews

Request written endorsements from colleagues or clients. Reviewers rate on specific skill dimensions, not generic stars.

Work Evidence Log

Structured project entries: problem, personal contribution, tools, result, difficulty. Up to 10 entries per profile.

Reference Manager

Store reference contact details. One-click reference request email triggered by platform at recruiter's request.

Portability Export

Export full Verification Vault as a verifiable PDF or shareable link. Works outside Aptely — truly owned by the talent.

Vault completeness directly raises the Skill Validity Score visible to recruiters — talent is motivated to fill it

Notifications & Communication Feed

Notification Types

Application Status Change
Instant push + email when recruiter advances, rejects or holds

Interview Scheduled
Calendar invite + prep brief delivered the moment slot is confirmed

Message from Recruiter
Direct in-platform messaging — no email thread sprawl

Offer Received
High-priority alert with 48h response window countdown

Assessment Due
Reminder with deadline and time estimate — one click to start

Profile Nudge
Weekly completeness prompt if score drops below target

Comms Design Principles

No Ghosting
Every status change triggers a communication — talent always knows where they stand.

Single Thread
All recruiter messages in one place. No WhatsApp, no email chains.

Preference Control
Talent sets notification preferences: push, email, or digest.

Audit Trail
Every communication is timestamped and stored — talent has receipts.

Talent response speed and engagement are tracked — high responsiveness boosts the Reliability Index

DESIGN

Talent UX Principles

The portal must feel built for the talent — not adapted from a recruiter tool.

01 Transparency First

Talent always knows what recruiters see about them. No hidden scores, no opaque flags. If a risk flag exists, they see it and can address it.

02 Effort Must Pay Off

Every piece of data the talent provides must visibly move a score or unlock a feature. Dead-end forms kill engagement. Show the impact immediately.

03 Mobile-First

Most talents will interact on mobile — checking status updates, reading interview prep, reviewing offers. Every screen must be fully functional on a phone.

04 Owned, Not Rented

Talent's Capability Record belongs to them. Export it, share it, take it elsewhere. This trust is the reason they invest in building a quality profile.

05 Privacy by Default

Talent controls which parts of their profile are visible to which recruiters. Salary expectations and availability can be hidden until they choose to share.

06 Progress, Not Perfection

A talent with 60% profile completeness is still valuable. The platform motivates incremental improvement rather than gatekeeping access behind a full profile.

A great talent UX is a recruiter acquisition tool — happy talents refer recruiters and return for future placements

IMPLEMENTATION

Build Stages — Phase 3

Stage 1

Weeks 1–4

Talent Portal MVP

Softr / Noloco · Airtable · Tally forms · SendGrid

- Talent profile page (read-only view of their Capability Record)
- Application status tracker (manual updates from recruiter side)
- Email notification triggers for status changes
- Proof asset upload form linked to skills

Stage 2

Weeks 5–12

Interactive Portal

Bubble / WeWeb · Xano / Supabase · OpenAI API · Twilio

- Self-editing profile with completeness score engine
- Interview prep brief generation (GPT-4 from Role DNA)
- In-platform messaging with recruiters
- Offer review and counter-proposal flow

Stage 3

Weeks 13–24

Full Platform

Next.js · Supabase · DocuSign API · Mobile PWA

- Mobile-first PWA with push notifications
- Full Verification Vault with badge system
- Portable Capability Record export (PDF + shareable link)
- Privacy controls per recruiter / role

Stage 1 can launch in parallel with Phase 2 — talent portal data enriches the recruiter side from day one

INTEGRATION

How Phases 1, 2 & 3 Connect

Phase 3 is not a standalone product — it completes the data loop that makes the whole platform intelligent.

PHASE 1

Talent Intelligence Foundation

Forms, DNA profiles, scoring framework, matching engine

⇄

PHASE 2

Interview to Onboarding

Scheduling, execution, comms, offer management, onboarding

⇄

PHASE 3

Talent Interface Portal

Profile hub, tracker, prep, offer review, vault, notifications

Data flow:

P1 builds Talent DNA → P2 captures interview signals → P3 lets talent enrich proof → P1 scoring updates in real-time

The result: a self-improving talent intelligence system where every interaction makes the next placement faster and more accurate

Phase 1
Foundation

Phase 2
Interview→Offer

Phase 3
Talent Portal

Aptely is Complete.

A talent intelligence platform that works for everyone:

Talents

Own their capability, control their narrative, track their process.

Recruiters

Shortlist in minutes, close faster, defend their fees with data.

Companies

Hire for reality, not résumé — and keep who they hire.
